Implementation of the "Clean Smokestacks Act"

A Report to the Environmental Review Commission and the Joint Legislative Utility Review Committee

Submitted by the North Carolina Department of Environment and Natural Resources and the North Carolina Utilities Commission

June 1, 2004
Implementation of the "Clean Smokestacks Act"

A Report to the
Environmental Review Commission and the Joint Legislative Utility
Review Committee

Submitted by the North Carolina Department of Environment and
Natural Resources and the North Carolina Utilities Commission

This report is submitted pursuant to the requirement of Section 14 of
Session Law 2002-4, Senate Bill 1078 enacted June 20, 2002. The actions taken to
date by Progress Energy Carolinas, Inc. and Duke Power, a Division of Duke
Energy Corporation, appear to be in accordance with the provisions and
requirements of the Clean Smokestacks Act.

Signed:  ________________________________________________
William G. Ross, Jr., Secretary
Department of Environment and Natural Resources

Signed:  ________________________________________________
Jo Anne Sanford, Chair
North Carolina Utilities Commission

June 1, 2004
Implementation of the "Clean Smokestacks Act"

A Report to the
Environmental Review Commission and the Joint Legislative Utility Review Committee

June 1, 2004

The General Assembly of North Carolina, Session 2001, passed Session Law 2002-4 also known as Senate Bill 1078. This legislation is titled "An Act to Improve Air Quality in the State by Imposing Limits on the Emission of Certain Pollutants from Certain Facilities that Burn Coal to Generate Electricity and to Provide for Recovery by Electric Utilities of the Costs of Achieving Compliance with Those Limits" ("the Clean Smokestacks Act" or "the Act"). The Clean Smokestacks Act, in Section 14, requires the Department of Environment and Natural Resources ("DENR") and the Utilities Commission ("Commission") to report annually, i.e., by June 1 of each year, on the implementation of the Act to the Environmental Review Commission and the Joint Legislative Utility Review Committee.

The Act, in Section 9, requires Duke Energy and Progress Energy to submit annual reports to DENR and the Commission containing certain specified information. Duke Energy and Progress Energy filed reports, with DENR and the Commission, dated March 31, 2004, and April 1, 2004, respectively. Specifically, such reports were submitted in compliance with the requirements of G.S. 62-133.6(i). Duke Energy’s and Progress Energy’s reports are attached, and made part of this report, as Attachments A and B, respectively.

Additionally, the Secretary of DENR wrote the Commission on May 3, 2004, as follows:

“North Carolina’s investor owned electric utilities, Duke Energy and Progress Energy, have filed their compliance plan annual updates for 2004 in accordance with N.C.G.S. 62-133.6(i), Section 9(i) of S.L. 2002-4, known as the ‘Clean Smokestacks Act’. Pursuant to N.C.G.S. 62-133.6(j), the Department of Environment and Natural Resources has reviewed this information, and the submittals comply with the Act. The plans and schedules of the companies appear adequate to achieve the emission limitations set out in N.C.G.S. 143-215.107D.”

This report is presented to meet the reporting requirement of the Act pertaining to DENR and the Commission, as discussed above, and is submitted jointly by DENR and the Commission. The report is structured to address the various actions that have occurred pursuant to the provisions of Sections 9, 10, 12 and 13 of this Act. Reports of actions under these Sections describe the extent of implementation of the Act to this date.
I. Section 9(c) of the Act, Codified as Section 62-133.6(c) of the North Carolina General Statutes

G.S. 62-133.6(c) provides: The investor-owned public utilities shall file their compliance plans, including initial cost estimates, with the Commission and the Department of Environment and Natural Resources not later than 10 days after the date on which this section becomes effective. The Commission shall consult with the Secretary of Environment and Natural Resources and shall consider the advice of the Secretary as to whether an investor-owned public utility's proposed compliance plan is adequate to achieve the emissions limitations set out in G.S. 143-215.107D.

Status: North Carolina’s investor-owned electric utilities, Progress Energy Carolinas, Inc. (Progress Energy) and Duke Power, a division of Duke Energy Corporation (Duke Energy), filed their initial compliance plans as required in June and July of 2002, in accordance with G.S. 62-133.6(c), Section 9(c) of S.L. 2002-4, the Clean Smokestacks Act. DENR reviewed this information and determined that the submittals comply with the Act and, as proposed, appear adequate to achieve the emission limitations set out in G.S. 143-215.107D.

II. Section 9(i) of the Act, Codified as Section 62-133.6(i) of the North Carolina General Statutes

G.S. 62-133.6(i) provides: An investor-owned public utility that is subject to the emissions limitations set out in G.S. 143-215.107D shall submit to the Commission and to the Department of Environment and Natural Resources on or before 1 April of each year a verified statement that contains all of the following [specified information]:

The following are the eleven subsections of G.S. 62-133.6(i) and the related responses from Progress Energy and Duke Energy for each subsection:

1. G.S. 62-133.6(i)(1) requires: A detailed report on the investor-owned public utility's plans for meeting the emissions limitations set out in G.S. 143-215.107D.

Progress Energy Response: "The plan for Progress Energy Carolinas, Inc. was originally submitted on July 29, 2002. Appendix A (of the attached Progress submittal dated April 1, 2004) contains an updated version of this plan, effective April 1, 2004."

Duke Energy Response: "Exhibits A and B (of the attached Duke submittal dated March 31, 2004) outline the technology selections by facility and unit, projected operational dates, expected emission rates, and the corresponding tons of emissions that demonstrate compliance with G.S. 143-215.107D."
2. **G.S. 62-133.6(i)(2) requires:** *The actual environmental compliance costs incurred by the investor-owned public utility in the previous calendar year, including a description of the construction undertaken and completed during that year.*

**Summary of Progress Energy Report:** The actual environmental compliance costs incurred by Progress Energy in calendar year 2003 were $22.3 million. Construction began at both Roxboro and Asheville plants after receipt of the necessary Title V permits and approval of soil and erosion control plans.

**Summary of Duke Energy Report:** The actual environmental compliance costs incurred by Duke Energy in calendar year 2003 were $16.0 million. The Company reported that such costs were incurred for such things as a variety of project studies and investigations, engineering, equipment specifications development, equipment layout, contracting related costs, and logistics.

3. **G.S. 62-133.6(i)(3) requires:** *The amount of the investor-owned public utility's environmental compliance cost amortized in the previous calendar year.*

4. **G.S. 62-133.6(i)(4) requires:** *An estimate of the investor-owned public utility's environmental compliance costs and the basis for any revisions of those estimates when compared to the estimates submitted during the previous year.*

**Summary of Progress Energy Report:** Progress Energy reported that, while some unit total and annual costs have changed, the total project cost in future dollars remains at $813 million. More specifically, in its 2004 report, the Company estimated such cost to be $812.968 million, as compared to the $813.119 million reflected in its 2003 report, a reduction of $151,000. The Company observed that the projected SO₂ removal rates have increased for scrubbed units. As a result, the planned scrubber for Lee 3 has been cancelled.

**Summary of Duke Energy Report:** Duke Energy reported that its expected costs are not significantly different than the estimates provided in 2003. More specifically, in its 2004 report, the Company estimated its compliance costs to be $1.526 billion, as compared to the $1.479 billion reflected in its 2003 report, an increase of $47 million. The Company also reported that the technologies expected to be required to support compliance have not changed. The Company further stated that the
minor adjustments to the estimates at the project level are the result of additional project scope definition and refinement of project schedules only.

5. **G.S. 62-133.6(i)(5) requires:** A description of all permits required in order to comply with the provisions of G.S. 143-215.107D for which the investor-owned public utility has applied and the status of those permits or permit applications.

**Progress Energy Response:**

**Asheville Plant**
- Revised Title V permits to support construction activities have been issued
- NPDES Permit application submitted for required wastewater system modifications
- Soil erosion and sedimentation control plans have been approved

**Roxboro Plant**
- Revised Title V permits to support construction activities have been issued
- Soil erosion and sedimentation control plans have been approved

**Duke Energy Response:**

"**Allen Steam Station SNCR, Unit 1**
- Air Permit Application for temporary trial submitted and final permit received in 2002
- NPDES Permit Modification for temporary trial submitted and permit modification received in 2002
- Air Permit Application for permanent equipment installation submitted and final permit received in 2002

**Marshall Steam Station SNCR, Unit 4**
- Air Permit Application for temporary trial submitted and final permit received in 2002
- NPDES Permit Modification for temporary trial submitted and permit modification received in 2002
- Marshall Steam Station Scrubbers, Units 1-4
  - Air Permit Application – Submitted 9/17/03; received 2/5/04
  - Sedimentation and Erosion Control Plan – Submitted 9/11/03; received 10/8/03; amended 12/19/03; amendments approved 12/31/03
  - NPDES Modification – Submitted 4/30/03; received 1/23/04
  - Landfill Site Suitability Application – Submitted 9/3/03"

6. **G.S. 62-133.6(i)(6) requires:** A description of the construction related to compliance with the provisions of G.S. 143-215.107D that is anticipated during the following year.

**Progress Energy Response:** See Appendix C of the attached letter from Progress Energy dated April 1, 2004, for details of construction and installation of equipment. The Asheville and Roxboro plants will have significant construction in 2004.
Duke Energy Response: See attached letter from Duke Energy dated March 31, 2003, for details of construction anticipated for the next year for:

- Allen Steam Station SNCR, Unit 3
- Allen Steam Station SNCR, Unit 4
- Allen Steam Station Scrubbers
- Belews Creek Steam Station Scrubbers
- Buck Steam Station SNCR, Unit 5
- Buck Steam Station SNCR, Unit 6
- Cliffside Steam Station Scrubbers
- Marshall Steam Station SNCR, Unit 1
- Marshall Steam Station SNCR, Unit 2
- Marshall Steam Station SNCR, Unit 3
- Marshall Steam Station Scrubbers
- Riverbend Steam Station SNCR, Unit 4
- Riverbend Steam Station Burners, Unit 5
- Riverbend Steam Station SNCR, Unit 7

7. **G.S. 62-133.6(i)(7) requires:** A description of the applications for permits required in order to comply with the provisions of G.S. 143-215.107D that are anticipated during the following year.

Progress Energy Response: "An NPDES permit modification application will be submitted in the 2nd quarter of 2004 to request changes to the existing wastewater discharge permit for the Roxboro Plant. Operation of scrubbers to comply with G.S. 143-214.107D will create a new wastewater stream, which requires modification of our current permit. The application characterizes expected wastewater contaminant concentrations and flows."

Duke Energy Response:

"Allen Steam Station SNCR, Unit 3
- Air Permit Application – Plan to submit 8/1/04

Belews Creek Steam Station Scrubbers, Units 1-2
- Landfill Site Suitability Application – Plan to submit 1/11/05
- Air Permit Application – Plan to submit 5/20/05
- Sedimentation and Erosion Control Plan – Plan to submit 6/6/05
- NPDES Permit Application – Plan to submit 5/25/04

Dan River Steam Station SOFA, Unit 3
- Air Permit Application – Plan to submit January, 2005

Marshall Steam Station SNCR, Unit 2
- Air Permit Application – Plan to submit June, 2005

Marshall Steam Station SNCR, Unit 3
- Air Permit Application – Plan to submit 6/1/04
- NPDES Permit Modification (if required) – Plan to submit 10/27/04"
- Sedimentation and Erosion Control (if required) – Plan to submit 11/15/04

**Marshall Steam Station Scrubbers**
- Landfill Construction Plan Application – Plan to submit 4/1/04
- Sedimentation and Erosion Control Plan for balance of Marshall site work – Plan to submit 6/18/04
- Authorization to Construct (ATC) application for FGD wastewater treatment system – Plan to submit 6/1/04

**Riverbend Steam Station SOFA, Unit 5**
- Air Permit Application – Plan to submit 5/1/04

**Riverbend Steam Station SOFA, Unit 6**
- Air Permit Application – Plan to submit January, 2005

8. **G.S. 62-133.6(i)(8) requires:** The results of equipment testing related to compliance with G.S. 143-215.107D.

**Progress Energy Response:** "No equipment testing related to compliance with G.S. 143-215.107D occurred in 2003."

**Duke Energy Response:**

"**Allen Steam Station SNCR, Unit 1**
- Technology demonstration in December, 2001 (one week test)
  - Nominal 30% reduction in NOx with ammonia slip of 5 to 10 ppm at full load
  - Average NOx outlet rate of 0.15 #/MMBTU for the test period
- Equipment acceptance testing in November, 2003
  - Nominal 25% reduction in NOx with ammonia slip of less than 5 ppm at full load

**Marshall Steam Station SNCR, Unit 4**
- Technology demonstration in October - November, 2002 (one month test)
  - Average 24% - 25% reduction in NOx with ammonia slip of 5 to 10 ppm at full load
  - Average NOx outlet rate of 0.163 #/MMBTU for the test period"

9. **G.S. 62-133.6(i)(9) requires:** The number of tons of oxides of nitrogen (NOx) and sulfur dioxide (SO2) emitted during the previous calendar year from the coal-fired generating units that are subject to the emissions limitations set out in G.S. 143-215.107D.
Progress Energy Response: “The total calendar year 2003 emissions from the affected coal-fired Progress Energy Carolinas units are:

- NOx - 56,059
- SO2 - 196,184"

Duke Energy Response: In the 2003 calendar year, the following were emitted from the North Carolina based Duke Energy coal-fired units:

- NOx - 75,550 tons
- SO2 - 264,031 tons

10. **G.S. 62-133.6(i)(10) requires:** The emissions allowances described in G.S. 143-215.107D(i) that are acquired by the investor-owned public utility that result from compliance with the emissions limitations set out in G.S. 143-215.107D.

Progress Energy Response: "No emissions allowances resulting from compliance with G.S. 143-215.107D were acquired in 2003."

Duke Energy Response: “No emissions allowances have been acquired by Duke Power Company resulting from compliance with the limitations set out in G.S. 143-215.107D.”

11. **G.S. 62-133.6(i)(11) requires:** Any other information requested by the Commission or the Department of Environment and Natural Resources

Progress Energy Response: Progress Energy responded that it currently expects to amortize its remaining compliance costs as follows: 2004 - $75 million; 2005 – $120 to $140 million; 2006 - $125 to $145 million; 2007 – $130 to $150 million; 2008 - $121.5 million; and 2009 - $121.5 million. The Company noted that those amounts are subject to change.

III. **Section 10 of the Act provides:** It is the intent of the General Assembly that the State use all available resources and means, including negotiation, participation in interstate compacts and multistate and interagency agreements, petitions pursuant to 42 U.S.C. § 7426, and litigation to induce other states and entities, including the Tennessee Valley Authority, to achieve reductions in emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO2) comparable to those required by G.S. 143-215.107D, as
enacted by Section 1 of this act, on a comparable schedule. The State shall give particular attention to those states and other entities whose emissions negatively impact air quality in North Carolina or whose failure to achieve comparable reductions would place the economy of North Carolina at a competitive disadvantage.

DENR and Division of Air Quality (DAQ) Activities to implement this Section:

- A meeting was held between DENR/DAQ and the Tennessee Valley Authority (TVA) and the Tennessee air program officials in August 2002, to discuss actions planned by TVA that would be comparable to the Clean Smokestacks Act. TVA presented their plans to add five additional SO2 scrubbers to power plants primarily in the eastern portion of the TVA system. These new scrubbers should benefit North Carolina most. TVA plans to complete installation of the new facilities by 2010 and the first plant, Paradise, will be installed by 2006. Regarding NOx control, TVA is on schedule to have the first 8 of its selective catalytic reduction (SCR) systems in place. TVA plans to have 25 boiler units controlled by 2005 at a cost of $1.3 billion which will reduce ozone season NOx by 75 percent.

Through DENR’s efforts, the Clean Smokestacks Act is achieving notoriety nationally and is being touted in other States as a model for State action. The Secretary of DENR and the Chief of Planning of DAQ made presentations about the Clean Smokestacks Act at two national state environmental organization meetings in the fall of 2002. The Chief of Planning of DAQ testified in 2002, at a U.S. Senate Environment and Public Works Committee Hearing on the features and benefits of North Carolina’s Clean Smokestacks Act. The Deputy Director of DAQ participates on a national dialogue workgroup addressing ideal features of national multi-pollutant legislation for coal-fired utility boilers. The Clean Smokestacks Act is held up as an ideal example.

- The State also has been active in maintaining federal standards. In an April 2003 letter to EPA Administrator Whitman, Governor Easley urged the Administration to ensure that the federal Clear Skies bill not override State initiatives such as the Clean Smokestacks Act. The Governor also indicated the State’s opposition to bill text that would extinguish the statutory rights of States regarding interstate pollution abatement. DAQ and the Attorney General commented last month in opposition to a proposed federal rule that would weaken the federal New Source Review program and potentially result in significant new upwind emissions. North Carolina filed a petition on March 18, 2004, calling for the U.S. Environmental Protection Agency to require major reductions of air pollution in 13 upwind states that are significantly impacting this state. Reducing these emissions will substantially improve air quality in North Carolina. The petition, filed pursuant to Section 126 of the Clean Air Act, calls for the EPA to require cuts in fine particle-forming emissions from power plants in Alabama, Georgia, Illinois, Indiana, Kentucky, Michigan, Ohio, Pennsylvania,
South Carolina, Tennessee, Virginia and West Virginia, and ozone-forming emissions in Georgia, Maryland, South Carolina, Tennessee and Virginia.

IV. **Section 12 of the Act provides:** The General Assembly anticipates that measures implemented to achieve the reductions in emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO2) required by G.S. 143-215.107D, as enacted by Section 1 of this act, will also result in significant reductions in the emissions of mercury from coal-fired generating units. The Division of Air Quality of the Department of Environment and Natural Resources shall study issues related to monitoring emissions of mercury and the development and implementation of standards and plans to implement programs to control emissions of mercury from coal-fired generating units. The Division shall evaluate available control technologies and shall estimate the benefits and costs of alternative strategies to reduce emissions of mercury. The Division shall annually report its interim findings and recommendations to the Environmental Management Commission and the Environmental Review Commission beginning 1 September 2003. The Division shall report its final findings and recommendations to the Environmental Management Commission and the Environmental Review Commission no later than 1 September 2005. The costs of implementing any air quality standards and plans to reduce the emission of mercury from coal-fired generating units below the standards in effect on the date this act becomes effective, except to the extent that the emission of mercury is reduced as a result of the reductions in the emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO2) required to achieve the emissions limitations set out in G.S. 143-215.107D, as enacted by Section 1 of this act, shall not be recoverable pursuant to G.S. 62-133.6, as enacted by Section 9 of this act.

**DAQ Actions to Implement this Section:** The DAQ submitted a report on September 1, 2003, as required by this section. The first report primarily focused on the "state of knowledge" of the co-benefit of mercury control that will result from the control of NOx and SO2 from coal-fired utility boilers. Also, preliminary estimates were made for this co-benefit for the North Carolina utility boilers based on the initial plans submitted by Progress Energy and Duke Energy. Two public workshops were held in June and July 2003, to meet with all interested stakeholders to offer review of the draft DAQ report. DAQ is presently developing the September 1, 2004 report.

V. **Section 13 of the Act provides:** The Division of Air Quality of the Department of Environment and Natural Resources shall study issues related to the development and implementation of standards and plans to implement programs to control emissions of carbon dioxide (CO2) from coal-fired generating units and other stationary sources of air pollution. The Division shall evaluate available control technologies and shall estimate the benefits and costs of alternative strategies to reduce emissions of carbon dioxide (CO2). The Division shall annually report its interim findings and recommendations to the Environmental Management Commission and the Environmental Review Commission beginning 1 September 2003. The Division shall report its final findings and recommendations to the Environmental Management Commission and the Environmental Review Commission no later than
1 September 2005. The costs of implementing any air quality standards and plans to reduce the emission of carbon dioxide (CO2) from coal-fired generating units below the standards in effect on the date this act becomes effective, except to the extent that the emission of carbon dioxide (CO2) is reduced as a result of the reductions in the emissions of oxides of nitrogen (NOx) and sulfur dioxide (SO2) required to achieve the emissions limitations set out in G.S. 143-215.107D, as enacted by Section 1 of this act, shall not be recoverable pursuant to G.S. 62-133.6, as enacted by Section 9 of this act.

DAQ Actions to Implement this Section: The DAQ submitted a report on September 1, 2003, as required by this section. The first report primarily focused on the "state of knowledge" and actions being taken or planned elsewhere regarding CO2 control from coal-fired utility boilers. Two public workshops were held in June and July 2003, to meet with all interested stakeholders to offer review of the draft DAQ report.

VI. Supplementary Information: As stated in the May 30, 2003 report, the Public Staff – North Carolina Utilities Commission (Public Staff) will audit the books and records of Progress Energy and Duke Energy in regard to the costs incurred and amortized by the Companies concerning their compliance with the provisions of the Clean Smokestacks Act. The Public Staff has undertaken such a review, focusing on the verification of costs related to complying with the Act, the amortization of those costs, and contracts with vendors who will engineer and construct emission reduction equipment. The Public Staff filed its reports with the Commission on May 3, 2004. Attached, and made part of this report, are the Public Staff's reports for Duke Energy and Progress Energy (without Attachment), Attachments C and D, respectively.

CONCLUSION

Actions taken to date by Progress Energy and Duke Energy appear to be in accordance with the provisions and requirements of the Clean Smokestacks Act.
ATTACHMENTS

Attachment C: Report of the Public Staff on Costs Incurred and Amortized by Duke Energy Corporation in Compliance with Session Law 2002-4

Attachment D: Report of the Public Staff on Costs Incurred and Amortized by Progress Energy Carolinas, Inc. in Compliance With Session Law 2002-4

Subject: Senate Bill 1078

Duke Power Compliance Plan Annual Update

Record No. NC CAP 003
Certified: 7002 3150 0003 7316 2413

Dear Ms. Sanford:

As required by Senate Bill 1078, Duke Power is required to file information on or before 1 April of each year to update the Commission on progress to date, upcoming activities and expected strategies to achieve the emissions limitations set out in G.S. 143-215.107D.

The current plan to meet the emission requirements for NOx and SO2 continues to include:

- NOx Control – The installation of Selective Catalytic Reduction (SCR) on Cliffside Steam Station Unit 5 and Beleys Creek Steam Station Units 1&2; the installation of Selective Non Catalytic Reduction (SNCR) with Low-NOx burners on the 24 remaining units.

- SO2 Control – The installation of wet scrubbers on our twelve largest generating units.

Exhibits A and B outline the unit specific technology selections, projected operational dates, expected emission rates, and the corresponding tons of emissions that demonstrate compliance with the legislative requirements. The projected ‘environmental compliance costs’ for these pollution control projects are included in Exhibit C.

Duke Power will continue to optimize the technology selection, implementation schedule and cost, and will provide annual updates to the NC Utilities Commission as required. If you have questions regarding any aspect of our plan, please do not hesitate to contact my office at 704-373-4363.

Sincerely,

George T. Everett, Ph.D.
Vice President, Environmental and Public Policy
Duke Power

Enclosure

1. A detailed report on the investor-owned public utility’s plans for meeting the emissions limitations set out in G.S. 143-215.107D.

Exhibits A and B outline the technology selections by facility and unit, projected operational dates, expected emission rates, and the corresponding tons of emissions that demonstrate compliance with the provisions of G.S. 143-215.107D.

2. The actual environmental compliance costs incurred by the investor-owned public utility in the previous calendar year, including a description of the construction undertaken and completed during that year.

In the 2003 calendar year, Duke Power Company spent $16,041,000 on activities in support of compliance with the provisions of G.S. 143-215.107D. Exact amounts associated with each project are provided in Exhibit C, and a description of the associated activities is provided below:

**Allen Steam Station SNCR, Unit 1**
- Equipment installation completed
- Acceptance testing completed

**Allen Steam Station SNCR, Unit 3**
- Project planning and scope development initiated
- Boiler testing and modeling completed

**Allen Steam Station SNCR, Unit 5**
- Project planning and scope development initiated

**Allen Steam Station Scrubbers**
- Project studies and investigations related to reagent handling, equipment optimization, byproduct handling, equipment layout and logistics completed

**Belews Creek Steam Station Scrubbers**
- Project studies and investigations related to reagent handling, equipment optimization, byproduct handling, equipment layout and logistics completed

**Cliffside Steam Station Scrubbers**
- Project studies and investigations related to reagent handling, equipment optimization, byproduct handling, equipment layout and logistics completed

**Dan River Steam Station Burners, Unit 3**
- Electrical and mechanical design continued

**Marshall Steam Station SNCR, Unit 1**
- Project planning and scope development initiated
Marshall Steam Station SNCR, Unit 2
- Project planning and scope development initiated
- Boiler testing and modeling completed

Marshall Steam Station SNCR, Unit 3
- SNCR Equipment engineering completed

Marshall Steam Station SNCR, Unit 4
- SNCR Equipment engineering completed

Marshall Steam Station Scrubbers
- Initial engineering phase for balance of plant (BOP) scope completed
- Approximately 25% of detailed engineering completed
- EPC contract for FGD Project awarded on December 19, 2003

Riverbend Steam Station Burners, Unit 5
- Electrical and mechanical design continued

Riverbend Steam Station Burners, Unit 6
- Electrical and mechanical design continued

3. The amount of the investor-owned public utility’s environmental compliance costs amortized in the previous calendar year.

In the 2003 calendar year, $114,813,336 was amortized related to construction work activity in support of compliance with the provisions of G.S. 143-215.107D.

4. An estimate of the investor-owned public utility’s environmental compliance costs and the basis for any revisions of those estimates when compared to the estimates submitted during the previous year.

The estimated ‘environmental compliance costs’ as defined in G.S. 143-215.107D are provided in Exhibit C.

These expected costs are not significantly different than the estimates provided in the 2003 annual filing. The minor adjustments to the estimates at the project level are the result of additional project scope definition and refinement of project schedules only.

The technologies expected to be required to support compliance have not changed from what was provided in the 2003 annual filing or subsequent data requests. These technology decisions continue to be evaluated more fully, and changes to these technology decisions may ultimately be required in order to comply with emissions limitations.
5. A description of all permits required in order to comply with the provisions of G.S. 143-215.107D for which the investor-owned public utility has applied and the status of those permits or permit applications.

**Allen Steam Station SNCR, Unit 1**
- Air Permit Application for temporary trial submitted and final permit received in 2002
- NPDES Permit Modification for temporary trial submitted and permit modification received in 2002
- Air Permit Application for permanent equipment installation submitted and final permit received in 2002

**Marshall Steam Station SNCR, Unit 4**
- Air Permit Application for temporary trial submitted and final permit received in 2002
- NPDES Permit Modification for temporary trial submitted and permit modification received in 2002

**Marshall Steam Station Scrubbers, Units 1-4**
- Air Permit Application – Submitted 9/17/03; received 2/5/04
- Sedimentation and Erosion Control Plan – Submitted 9/11/03; received 10/8/03; amended 12/19/03; amendments approved 12/31/03
- NPDES Modification – Submitted 4/30/03; received 1/23/04
- Landfill Site Suitability Application – Submitted 9/3/03

6. A description of the construction related to compliance with the provisions of G.S. 143-215.107D that is anticipated during the following year.

**Allen Steam Station SNCR, Unit 3**
- SNCR equipment engineering expected to occur in 2004
- SNCR equipment installation expected to occur in 2nd quarter of 2005

**Allen Steam Station SNCR, Unit 4**
- Boiler testing and modeling expected to occur in 2004

**Allen Steam Station Scrubbers**
- No FGD construction planned in 2004-2005, and no further substantial FGD engineering anticipated until 2008

**Belews Creek Steam Station Scrubbers**
- Further FGD engineering study expected to be awarded in 3rd or 4th quarter of 2004 to finalize FGD project scope, funding, and implementation schedule
- EPC contract expected to be awarded in 3rd quarter of 2005
- Release for detailed engineering and potentially authorization for some early site prep may be awarded under a Limited Notice To Proceed (LNTP) to the EPC Contractor in 2nd quarter of 2005
- Full site mobilization of the EPC Contractor expected to begin in the 3rd quarter of 2005
- Only substantial construction expected to be started in 2005 would be general excavation, grading, and drainage
- Foundations may be started in 4th quarter of 2005

**Buck Steam Station SNCR, Unit 5**
- Boiler testing and modeling expected to occur in 2004
- SNCR equipment engineering expected to begin in 2004

**Buck Steam Station SNCR, Unit 6**
- Boiler testing and modeling expected to occur in 2004
- SNCR equipment engineering expected to begin in 2004

**Cliffside Steam Station Scrubbers**
- No FGD construction planned in 2004-2005, and no further substantial FGD engineering anticipated until 2006

**Marshall Steam Station SNCR, Unit 1**
- SNCR equipment engineering expected to begin in 2004

**Marshall Steam Station SNCR, Unit 2**
- SNCR equipment engineering expected to begin in 2004

**Marshall Steam Station SNCR, Unit 3**
- SNCR equipment installation expected to be completed by 2nd quarter of 2005

**Marshall Steam Station Scrubbers**
- EPC Contractor began mobilization at site on January 5, 2004
- Site prep (timber clearing) began in January and finished in March, 2004
- General excavation, grading, and drainage expected to start in April, 2004
- Installation of foundations expected to begin in June, 2004
- Erection of new wet stack (concrete wind screen) and installation of undergrounds (electrical duct bank and piping) expected to begin in September, 2004
- Erection of scrubber (absorber) building structural steel expected to begin in January, 2005
- Excavation and drainage for gypsum by-product landfill expected to start in February, 2005
- Erection of FGD ductwork structural support steel expected to begin in June, 2005
- Installation of FGD wastewater pre-treatment package (clarifier for removal of solid fines) expected to begin in July, 2005
- Switchyard tie-in and electrical power backfeed to FGD equipment expected to occur in November 2005.

**Riverbend Steam Station SNCR, Unit 4**
- Boiler testing and modeling expected to begin in 2004

**Riverbend Steam Station Burners, Unit 5**
- Installation of burners expected to be completed by 4th quarter of 2004

**Riverbend Steam Station SNCR, Unit 7**
- Boiler testing and modeling expected to begin in 2004
7. A description of the applications for permits required in order to comply with the provisions of G.S. 143-215.107D that are anticipated during the following year.

**Allen Steam Station SNCR, Unit 3**
- Air Permit Application – Plan to submit 8/1/04

**Belews Creek Steam Station Scrubbers, Units 1-2**
- Landfill Site Suitability Application – Plan to submit 1/11/05
- Air Permit Application – Plan to submit 5/20/05
- Sedimentation and Erosion Control Plan – Plan to submit 6/6/05
- NPDES Permit Modification – Plan to submit 5/25/04

**Dan River Steam Station SOFA, Unit 3**
- Air Permit Application – Plan to submit January, 2005

**Marshall Steam Station SNCR, Unit 2**
- Air Permit Application – Plan to submit June, 2005

**Marshall Steam Station SNCR, Unit 3**
- Air Permit Application – Plan to submit 6/1/04
- NPDES Permit Modification (if required) – Plan to submit 10/27/04
- Sedimentation and Erosion Control (if required) – Plan to submit 11/15/04

**Marshall Steam Station Scrubbers**
- Landfill Construction Plan Application – Plan to submit 4/1/04
- Sedimentation and Erosion Control Plan for balance of Marshall site work – Plan to submit 6/18/04
- Authorization to Construct (ATC) application for FGD wastewater treatment system – Plan to submit 6/1/04

**Riverbend Steam Station SOFA, Unit 5**
- Air Permit Application – Plan to submit 5/1/04

**Riverbend Steam Station SOFA, Unit 6**
- Air Permit Application – Plan to submit January, 2005

8. The results of equipment testing related to compliance with G.S. 143-215.107D.

**Allen Steam Station SNCR, Unit 1**
- Technology demonstration in December, 2001 (one week test)
  - Nominal 30% reduction in NOx with ammonia slip of 5 to 10 ppm at full load
  - Average NOx outlet rate of 0.15#/MMBTU for the test period
- Equipment acceptance testing in November, 2003
  - Nominal 25% reduction in NOx with ammonia slip of less than 5 ppm at full load
Marshall Steam Station SNCR, Unit 4
- Technology demonstration in October - November, 2002 (one month test)
  - Average 24% - 25% reduction in NO\textsubscript{x} with ammonia slip of 5 to 10 ppm at full load
  - Average NO\textsubscript{x} outlet rate of 0.163 #/MMBTU for the test period

Note: Test results do not necessarily guarantee long term results. Expected annual emission rates are provided in Exhibit A.

9. The number of tons of oxides of nitrogen (NO\textsubscript{x}) and sulfur dioxide (SO\textsubscript{2}) emitted during the previous calendar year from the coal-fired generating units that are subject to the emissions limitations set out in G.S. 143-215.107D.

In the 2003 calendar year, 75,550 tons of NO\textsubscript{x} and 264,031 tons of SO\textsubscript{2} were emitted from the North Carolina based Duke Power Company coal-fired units located in North Carolina and subject to the emissions limitations set out in G.S 143-215.107D.

10. The emissions allowances described in G.S. 143-215.107D(i) that are acquired by the investor-owned public utility that result from compliance with the emissions limitations set out in G.S. 143-215.107D.

No emissions allowances have been acquired by Duke Power Company resulting from compliance with the emissions limitations set out in G.S. 143-215.107D.

11. Any other information requested by the Commission or Department of Environment and Natural Resources.

No additional information has been requested to be included in this annual data submittal.

VERIFICATION

I, George T. Everett, state and attest that the attached information updating the North Carolina Utilities Commission on progress to date, upcoming activities, and expected strategies to achieve the emissions limitations set out in N.C.G.S.143-215.107.D (Annual Update) is filed on behalf of Duke Power, a division of Duke Energy; that I have reviewed said Annual Update and, in the exercise of due diligence, have made reasonable inquiry into the accuracy of the information provided therein; and that, to the best of my knowledge, information, and belief, all of the information contained therein is accurate and true, and no material information or fact has been knowingly omitted or misstated therein.

George T. Everett, Ph.D.
Vice President, Environmental & Public Policy

Date

3/31/04

Subscribed and sworn before me this the 31st day of March, 2004.

Re: Annual NC Clean Smokestacks Legislation Compliance Report

Dear Mrs. Thigpen:

Progress Energy Carolinas, Inc. submits the attached report for calendar year 2003 regarding the status of compliance with the provisions of the North Carolina Clean Smokestacks legislation. Section 9(f) of the legislation requires that an annual report of compliance progress be submitted to the Commission by April 1 of each year for the previous calendar year.

Very truly yours,

[Signature]

Len S. Anthony
Deputy General Counsel

William G. Ross Jr., Secretary
North Carolina Department of Environment and Natural Resources
1601 Mail Service Center
Raleigh, NC 27699

Dear Secretary Ross:

Progress Energy Carolinas, Inc. submits the attached report for calendar year 2003 regarding the status of compliance with the provisions of the North Carolina Clean Smokestacks legislation. Section 9(j) of the legislation requires that an annual report of compliance progress be submitted by April 1 of each year for the previous calendar year. Progress Energy Carolinas looks forward to continuing to work with you and your staff in processing the necessary permits that will facilitate the company’s compliance with this important legislation.

Please feel free to contact me at (919) 546-2449 if you have any questions.

Sincerely,

Chuck

Charles Wakild

Senate Bill 1078 – Clean Smokestacks Law
Calendar Year 2003 Progress Report

On June 20, 2002, North Carolina Senate Bill 1078, also known as the “Clean Smokestacks Law,” was signed into effect. This law requires significant reductions in the emissions of nitrogen oxides (NOx) and sulfur dioxide (SO2) from utility owned coal-fired power plants located in North Carolina. Section 9(i) of the bill, which is now incorporated as Section 62-133.6(i) of the North Carolina General Statutes, requires that an annual progress report regarding compliance with the Clean Smokestacks Law be submitted on or before April 1 of each year. The report must contain the following elements, taken verbatim from the statute:

1. A detailed report on the investor-owned public utility’s plans for meeting the emissions limitations set out in G.S. 143-215.107D.
2. The actual environmental compliance costs incurred by the investor-owned public utility in the previous calendar year, including a description of the construction undertaken and completed that year.
3. The amount of the investor-owned public utility’s environmental compliance costs amortized in the previous calendar year.
4. An estimate of the investor-owned public utility’s environmental compliance costs and the basis for any revisions of those estimates when compared to the estimates submitted during the previous year.
5. A description of all permits required in order to comply with the provisions of G.S. 143-215.107D for which the investor-owned public utility has applied and the status of those permits or permit applications.
6. A description of the construction related to compliance with the provisions of G.S. 143-215.107D that is anticipated during the following year.
7. A description of the applications for permits required in order to comply with the provisions of G.S. 143-215.107D that are anticipated during the following year.
8. The results of equipment testing related to compliance with G.S. 143-215.107D.
9. The number of tons of oxides of nitrogen (NOx) and sulfur dioxide (SO2) emitted during the previous calendar year from the coal-fired generating units that are subject to the emissions limitations set out in G.S. 143-215.107D.
10. The emissions allowances described in G.S. 143-215.107D(i) that are acquired by the investor-owned public utility that result from compliance with the emissions limitations set out in G.S. 143-215.107D.
11. Any other information requested by the Commission or the Department of Environment and Natural Resources.

Information responsive to each of these report elements follows. The responses are given by item number in the order in which they are presented above.
1. A detailed report on the investor-owned public utility’s plans for meeting the emissions limitations set out in G.S. 143-215.107D. 

The plan for Progress Energy Carolinas, Inc. was originally submitted on July 29, 2002. Appendix A contains an updated version of this plan, effective April 1, 2004.

2. The actual environmental compliance costs incurred by the investor-owned public utility in the previous calendar year, including a description of the construction undertaken and completed that year.

Appendix B contains the costs incurred toward compliance with G.S. 143-215.107D in 2003 and the projected costs for future years through 2013.

Construction began in the fourth quarter of 2003 at both Roxboro and Asheville plants after receipt of the necessary Title V permits and approval of soil and erosion control plans. At Asheville, the general contractor mobilized, soil erosion and control measures were installed, site preparation began, various underground piping was relocated, and production piles for the new chimney and absorber foundations were started.

At the Roxboro plant, soil and erosion control measures were installed, and excavation began for the relocation of the existing coal dumper to allow for installation of the new scrubber absorber towers, chimneys, and other flue gas desulfurization equipment.

3. The amount of the investor-owned public utility’s environmental compliance costs amortized in the previous calendar year.

Progress Energy Carolinas, Inc. amortized $74,218,806.00 in 2003.

4. An estimate of the investor-owned public utility’s environmental compliance costs and the basis for any revisions of those estimates when compared to the estimates submitted during the previous year.

Appendix B contains the costs incurred toward compliance with G.S. 143-215.107D in 2003 and the projected costs for future years through 2013. The estimated total capital costs (escalated) remain $813M. Projected SO2 removal rates have increased for scrubbed units. As a result, the planned scrubber for Lee 3 has been cancelled.

5. A description of all permits required in order to comply with the provisions of G.S. 143-215.107D for which the investor-owned public utility has applied and the status of those permits or permit applications.
Revised Title V permits to support construction activities for compliance with G.S. 143-215.107D have been issued for Asheville Plant (WNCRAQA Permit 11-628-03) and Roxboro Plant (NCDENR Permit 01001T31). We have no pending air permit applications. Progress Energy has submitted an NPDES Permit application package for required wastewater system modifications at Asheville Plant, and will be submitting the same for Roxboro Plant in 2004. The Asheville NPDES permit submittal includes an innovative constructed wetland treatment system, and the same is being evaluated for the Roxboro Plant. Soil erosion and sedimentation control plans have been submitted and approval received for the Asheville and Roxboro projects.

6. A description of the construction related to compliance with the provisions of G.S. 143-215.107D that is anticipated during the following year.

Appendix C presents the planned construction schedule for compliance with G.S. 143-215.107D. Note that this is a projected schedule of construction activity through 2013 that will be subject to modification. The schedule will be updated as part of this report each year.

Significant construction activities at Asheville during 2004 will include the erection of a new chimney to handle the lower temperature flue gas from the scrubbers, the absorber towers for both units, and various other scrubber support systems. At Roxboro, the significant construction activities in 2004 will focus on installation of a new limestone unloading facility and coal unloading facility to allow installation of the scrubber equipment beginning in 2005.

7. A description of the applications for permits required in order to comply with the provisions of G.S. 143-215.107D that are anticipated during the following year.

An NPDES permit modification application will be submitted in the 2nd quarter of 2004 to request changes to the existing wastewater discharge permit for Roxboro Plant. Operation of scrubbers to comply with G.S. 143-214.107D will create a new wastewater stream, which requires modification of our current permit. The application characterizes expected wastewater contaminant concentrations and flows.

8. The results of equipment testing related to compliance with G.S. 143-215.107D.

No equipment testing related to compliance with G.S. 143-215.107D occurred in 2003.

9. The number of tons of oxides of nitrogen (NOx) and sulfur dioxide (SO2) emitted during the previous calendar year from the coal-fired generating units that are subject to the emissions limitations set out in G.S. 143-215.107D.
The total calendar year 2003 emissions from the affected coal-fired Progress Energy Carolinas units are:

\[ \begin{align*} 
\text{NOx} & \quad 56,059 \\
\text{SO}_2 & \quad 196,184 
\end{align*} \]

10. The emissions allowances described in G.S. 143-215.107D(i) that are acquired by the investor-owned public utility that result from compliance with the emissions limitations set out in G.S. 143-215.107D.

No emissions allowances resulting from compliance with G.S. 143-215.107D were acquired in 2003.

11. Any other information requested by the Commission or the Department of Environment and Natural Resources.

NC Clean Smokestacks Audit Public Staff Data Request No. 1 was issued to Progress Energy in September of 2003, and a response was provided on October 6, 2003.
Appendix A

Progress Energy’s Air Quality Improvement Plan Supplement
April 1, 2004

On June 20, 2002 Governor Easley signed into law SB1078 which caps emissions of nitrogen oxides (NOx) and sulfur dioxide (SO2) from utility owned coal-fired power plants located in North Carolina. Progress Energy’s annual NOx emissions must be less than 25,000 tons beginning in 2007 and annual SO2 emissions must be less than 100,000 tons beginning in 2009 and less than 50,000 tons beginning in 2013. The emissions caps are cumulative for all coal-fired units in North Carolina. These caps represent a 56% reduction in NOx emissions from 2001 levels and a 74% reduction in SO2 from 2001 levels for Progress Energy.

Progress Energy owns and operates 18 coal-fired units at seven plants in North Carolina. The locations of these plants are shown on Attachment 1.

Nitrogen Oxides Emissions Control Plan

Progress Energy has been evaluating and installing NOx emissions controls on its coal-fired power plants since 1995 in order to comply with Title IV of the Clean Air Act and the NOx SIP Call rule adopted by the Environmental Management Commission (EMC). Substantial NOx emissions reductions have already been achieved (56,000 tons of NOx in 2003 compared with 112,000 tons in 1997) and further reductions will ensure compliance with the SB1078 target of 25,000 tons in calendar year 2007. This target will be achieved with a mix of combustion controls (which minimize the formation of NOx) such as low NOx burners and over fire air technologies, and post-combustion controls (which reduce NOx produced during the combustion of fossil fuel to molecular nitrogen) such as selective catalytic reduction and selective non-catalytic reduction technologies. Attachment 2 details Progress Energy’s North Carolina coal-fired electric generating units, their name plate generation capacity, and identifies the control technologies already installed and planned for installation. As technologies evolve or other circumstances change, a different mix of controls may be selected. Attachment 2 also projects the NOx emissions on a unit by unit basis based on the energy demand forecast and expected efficiencies of the NOx emissions controls employed. This information is provided only to show how compliance may be achieved and is not intended in any way to suggest unit specific emission limits. Actual emissions for each unit may be substantially different in 2007.

Flue Gas Desulfurization (FGD)

Progress Energy has completed screening studies on its coal-fired units at Asheville, Roxboro and Mayo plants. Wet scrubbers will be installed at these plants to remove 97% of the SO2 emissions. Babcock and Wilcox has been selected as the equipment supplier,
and Fluor Enterprises has been selected as the general contractor for the installation of the SO2 and NOx controls.

Wet scrubbers and dry scrubbers produce unique waste and by-product streams. Issues related to wastewater permitting and solid waste disposal are being addressed for each site. A contract was recently signed with a gypsum product end-user that will construct a wallboard facility at our Roxboro Plant. Progress Energy is working to identify beneficial uses for gypsum produced from its other FGD facilities. The Company plans to treat the scrubber wastewater stream at Asheville Plant using an innovative constructed wetland treatment system to ensure compliance with discharge limits. A similar system is being evaluated for Roxboro Plant. Discussions with various permitting divisions within DENR are ongoing.

Specific units are listed on Attachment 3 with data on projected schedules and projected annual emissions for 2009 and 2013. These projections are based on a 97% SO2 removal efficiency, forecasted energy demand, 3.3 lbs SO2/Mbtu coal on scrubbed units, and 1.2 lbs SO2/Mbtu coal on others. Note that these are projected schedules and will be subject to revision. In 2003, foundation work began for Asheville 1 and 2 scrubbers, as well as the new common stack. Construction work also commenced at Roxboro to relocate coal handling facilities in support of upcoming scrubber and stack construction.

Particular units controlled and control technologies utilized are subject to change depending on future developments in SO2 removal technologies, energy demand, sulfur content of coal, and other circumstances which may produce a more optimal plan for meeting the SO2 emissions limits in 2009 and 2013. DENR will be advised as changing circumstances dictate.

Docket No. E-7, Sub 718  

Dear Ms. Thigpen:  

Enclosed herewith for filing in the above-referenced docket are twenty-one (21) copies of the Report of the Public Staff on Costs Incurred and Amortized by Duke Energy Corporation in Compliance with Session Law 2002-("the Clean Smokestacks Act" or "the Act"). This report presents the results of the Public Staff's review of environmental compliance costs incurred and amortized by Duke Energy pursuant to the Act through the end of calendar year 2003. The Public Staff expects to file an update to this report annually.

Sincerely,

Antoinette R. Wike  
Chief Counsel  

Enclosure  

cc: Robert W. Kaylor  

ANTHONY R. WILKES  
Chief Counsel
Section 14 of Session Law 2002-4 ("the Clean Smokestacks Act" or "the Act") requires the Department of Environment and Natural Resources and the Utilities Commission to report by June 1 of each year, on the implementation of the Act to the Environmental Review Commission and the Joint Legislative Utility Review Committee. The May 30, 2003, report states that the Public Staff will audit the books and records of the investor owned utilities on an ongoing basis in regard to the costs incurred and amortized in compliance with the Act. The Public Staff has undertaken such a review, focusing on the verification of costs related to complying with the Act, the amortization of those costs, and contracts with vendors who will engineer and construct emission reduction equipment. This report presents the Public Staff's findings with regard to Duke Energy Corporation ("Duke Energy").

I. Work to be Performed

To comply with the emissions limitations for nitrogen oxides ("NO\textsubscript{x}\") and sulfur dioxide ("SO\textsubscript{2}\") established in the Act, Duke Energy plans to install emission reduction technologies at several of its facilities. Duke Energy has proposed to install Selective Non-catalytic Reduction ("SNCR") technology to remove NO\textsubscript{x} and flue-gas desulfurization ("FGD") technology to remove SO\textsubscript{2}. The facilities requiring these technologies are as follows:

<table>
<thead>
<tr>
<th>Facility</th>
<th>NO\textsubscript{x} Reduction</th>
<th>SO\textsubscript{2} Reduction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Allen Units 1-5</td>
<td>√</td>
<td>√</td>
</tr>
<tr>
<td>Belews Creek Units 1&amp;2</td>
<td></td>
<td>√</td>
</tr>
<tr>
<td>Buck Units 3-6</td>
<td>√</td>
<td></td>
</tr>
<tr>
<td>Cliffside Units 1-5</td>
<td>√ (units 1-4 only)</td>
<td>√ (unit 5 only)</td>
</tr>
<tr>
<td>Dan River Units 1-3</td>
<td>√</td>
<td></td>
</tr>
<tr>
<td>Marshall Units 1-4</td>
<td></td>
<td>√</td>
</tr>
<tr>
<td>Riverbend Units 4-7</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

In addition, Duke Energy is currently installing Selective Catalytic Reduction ("SCR") technology to remove NO\textsubscript{x} from its Belews Creek and Cliffside Unit 5 facilities to comply with the North Carolina State Implementation Plan for NO\textsubscript{x} ("NO\textsubscript{x} SIP Call"), which is discussed below.

Duke Energy has conducted preliminary testing on the SNCR equipment at the Allen facility and the SCR equipment at Belews Creek. Such testing is normal for start-
up with new systems. Results indicated that the NO\textsubscript{X} emissions targets at both facilities were not achieved. Duke Energy suspects that fuel quality may be the reason for the higher than expected emissions at its Allen facility, but it is still studying the problem at Belews Creek. Further testing will be conducted during the ozone season of 2004, with the results expected in late 2004. Duke Energy has expressed confidence that there is sufficient time to continue shake-down testing and achieve successful results, since the NO\textsubscript{X} targets are not triggered until 2007.

II. Capital Costs Associated with the Installation of Emission Reduction Technologies

Duke Energy is required by the Act to report its actual capital costs ("environmental compliance costs") associated with its plan to install emission reduction technologies pursuant to the Act. Operational costs related to these emission reduction technologies are not environmental compliance costs as defined by the Act.

Duke Energy reported that its actual environmental compliance costs in calendar year 2003 were $16,041,000. The cumulative environmental compliance costs incurred through 2003 are $20,464,000, broken down as follows:

<table>
<thead>
<tr>
<th>Year</th>
<th>Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td>2001</td>
<td>$800,000</td>
</tr>
<tr>
<td>2002</td>
<td>3,623,000</td>
</tr>
<tr>
<td>2003</td>
<td>16,041,000</td>
</tr>
<tr>
<td></td>
<td>$20,464,000</td>
</tr>
</tbody>
</table>

Duke Energy’s expenditures to date involve emission reduction technologies at its Allen, Belews Creek, Cliffside, Dan River, Marshall, and Riverbend facilities. Environmental compliance costs were incurred for project studies and investigations, engineering, equipment procurement, and contracting.

As part of its review, the Public Staff requested information from Duke Energy on the project costs, invoices documenting costs, and the purpose of the costs. Duke Energy provided project cost sheets delineating actual project costs by year into the following categories: (1) direct labor costs including overtime and premiums; (2) labor loads; (3) contract costs; (4) material costs; (5) overhead costs; and, (6) other costs. These costs are as follows:

<table>
<thead>
<tr>
<th>Category</th>
<th>Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td>Direct Labor</td>
<td>$2,075,949</td>
</tr>
<tr>
<td>Labor Loads</td>
<td>1,500,133</td>
</tr>
<tr>
<td>Contracts</td>
<td>12,020,087</td>
</tr>
<tr>
<td>Materials</td>
<td>3,091,897</td>
</tr>
<tr>
<td>Overheads</td>
<td>344,789</td>
</tr>
<tr>
<td>Other</td>
<td>1,430,696</td>
</tr>
<tr>
<td></td>
<td>$20,463,551</td>
</tr>
</tbody>
</table>

2
The project cost sheets were supported by detailed spreadsheets that incorporated all expenditures to date for a particular category. The Public Staff selected invoices in each category from the detailed spreadsheets, and requested Duke Energy to provide specific information on the selected costs. The Public Staff also had extensive discussions with Duke personnel regarding the individual cost items charged to specific projects. Duke Energy provided sufficient documentation to support each selected cost.

Duke Energy was also requested to delineate costs related to complying with NO\textsubscript{X} SIP Call. NO\textsubscript{X} SIP Call requires electric utility generating facilities to reduce their emissions of NO\textsubscript{X} during the summer ozone season, while the objective of the Clean Smokestacks Act is to reduce overall NO\textsubscript{X} emissions for the entire year.

As a result of NO\textsubscript{X} SIP Call, Duke Energy has undertaken a program to reconfigure its coal and air injection systems on its boiler units. In two cases, Belews Creek and Cliffside Unit 5, Duke Energy has chosen to install SCR technology to comply with NO\textsubscript{X} SIP Call. Costs related to NO\textsubscript{X} SIP Call are specifically exempted from the amortization allowed in Section 9 of the Act. The Public Staff has determined that Duke has not included any NO\textsubscript{X} SIP Call related costs to date in its reported actual environmental compliance costs. However, Duke Energy may be required to install additional SCR technology on facilities where it initially plans to install SNCR technology to comply with the Act, if the SNCR technology fails to achieve the emission reduction goals set forth in the Act due to matters, such as coal quality, that are beyond the scope of Duke’s contracts for work related to the Act.

III. Amortization of Costs

In Section 9 of the Act [G.S. 62-133.6(b)], the investor owned utilities are allowed to accelerate the cost recovery of their estimated environmental compliance costs over a seven-year period, beginning January 1, 2003, and ending December 31, 2009. Duke Energy’s estimated environmental compliance costs are $1.5 billion. The statute requires that a minimum of 70% of the environmental compliance costs shall be amortized before December 31, 2007, when the rate freeze period expires. In Duke Energy’s case, this amount is $1,050,000,000. The annual levelized amount is $214,285,714. The maximum amount that can be amortized in any given year is 150% of the annual levelized environmental compliance costs or, in Duke Energy’s case, $321,428,000.

On December 11, 2003 the Commission issued an order authorizing Duke Energy to use certain regulatory liability and amortization accounts to record the environmental compliance costs associated with the Act. The Commission further ordered that no accrual of AFUDC would be allowed on any construction expenditures up to the $1.5 billion required to be amortized pursuant to the Act.

Using the protocols established by the Act and subsequent Commission orders, Duke reported that its environmental compliance costs amortization for 2003 is
$114,813,336. The Public Staff has reviewed Duke Energy’s quarterly amortization filings and concluded that the reported amounts appear to be accurate.

IV. Contracts

The Public Staff also requested Duke Energy to provide for its review copies of any contracts for engineering, procurement, project management, and construction awarded to engineering firms and construction companies for the purpose of installing the emission reduction technologies. Duke Energy complied with the Public Staff’s request and provided the applicable contracts.

Duke Energy has contracted with a vendor to install SNCR equipment at its Allen Steam Station. Duke Energy has elected to award separate fixed-price contracts for each project requiring emission reduction technologies to comply with the Act.

Duke Energy has also signed an alliance agreement with two vendors, creating a consortium between the companies for the installation of FGD technology, optimized specifically for Duke Energy. This agreement is a fixed price contract for each of the twelve coal-fired generation units identified by Duke Energy that require emission reduction technology to comply with the Act.

The Public Staff reviewed these contracts and determined that they contain language establishing minimum performance standards on the equipment to be installed. The contracts contain a two-year performance standard that requires the equipment to perform as designed or the vendor would be responsible for replacing, repairing, or redesigning the equipment to achieve the emission reduction target specified by Duke Energy.

V. Site Inspections

On March 9, 2004, the Public Staff conducted a site inspection of Duke Energy’s Allen Steam Station in Belmont, North Carolina. Specifically, the Public Staff inspected the SNCR equipment that had been installed on the boilers and the other ancillary equipment used in the reduction of NOX emissions from those boilers. The Public Staff confirmed the installation of the equipment and discussed the testing procedures with the plant engineer. No other facilities were inspected. It is the intent of the Public Staff to conduct inspections of other coal-fired generating facilities as Duke Energy continues to install emission reduction equipment in its boiler units.
May 3, 2004

Re: Docket No. E-2, Sub 815

Dear Ms. Thigpen:

Enclosed herewith for filing in the above-referenced docket are twenty-one (21) copies of the Report of the Public Staff on Costs Incurred and Amortized by Progress Energy Carolinas, Inc. ("PEC") in Compliance with Session Law 2002-140 ("the Clean Smokestacks Act" or "the Act"). This report presents the results of the Public Staff's review of environmental compliance costs incurred and amortized by PEC pursuant to the Act through the end of calendar year 2003. The Public Staff expects to file an update to this report annually.

Sincerely,

Antoinette R. Wike
Chief Counsel

Enclosure

cc: Len S. Anthony
Section 14 of Session Law 2002-4 ("the Clean Smokestacks Act" or "the Act") requires the Department of Environment and Natural Resources and the Utilities Commission to report by June 1 of each year, on the implementation of the Act to the Environmental Review Commission and the Joint Legislative Utility Review Committee. The May 30, 2003, report states that the Public Staff will audit the books and records of the investor owned utilities on an ongoing basis in regard to the costs incurred and amortized in compliance with the Act. The Public Staff has undertaken such a review, focusing on the verification of costs related to complying with the Act, the amortization of those costs, and contracts with vendors who will engineer and construct emission reduction equipment. This report presents the Public Staff’s findings with regard to Progress Energy Carolinas, Inc. ("PEC").

I. Work to be Performed

To comply with the emissions limitations for nitrogen oxides ("NO_x") and sulfur dioxide ("SO_2") established in the Act, PEC plans to install emission reduction technologies at several of its facilities. PEC has proposed to install Selective Catalytic Reduction ("SCR") technology to remove NO_x and flue-gas desulfurization ("FGD") technology to remove SO_2 to comply with the Act. The facilities requiring these technologies are as follows:

<table>
<thead>
<tr>
<th>Facility</th>
<th>NO_x Reduction</th>
<th>SO_2 Reduction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Asheville Units 1&amp;2</td>
<td>√ (Unit 1 only)</td>
<td>√</td>
</tr>
<tr>
<td>Cape Fear Units 5&amp;6</td>
<td></td>
<td>√</td>
</tr>
<tr>
<td>Lee Unit 3</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Mayo Unit 1</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Roxboro Units 1-4</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Sutton Unit 3</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

PEC is also installing SCR technology and reconfiguring its coal and air injection systems to remove NO_x from its other coal-fired generating units to comply with the North Carolina State Implementation Plan for NO_x ("NO_x SIP Call"), which is discussed below.
Although PEC initially planned to install a scrubber on Lee Unit 3, PEC indicated in its annual compliance report filed on April 1, 2004, that this work has been cancelled because projected SO₂ removal rates for scrubbed units have increased.

PEC is only in the initial design and engineering phase of construction plan, and therefore no testing data is yet available.

II. Capital Costs Associated with the Installation of Emission Reduction Technologies

PEC is required by the Act to report the actual capital costs (“environmental compliance costs”) associated with its plan to install emission reduction technologies pursuant to the Act. Operational costs related to these emission reduction technologies are not environmental compliance costs as defined in the Act.

PEC reported that its actual environmental compliance costs in calendar year 2003 were $22,323,791. The cumulative environmental compliance costs incurred through 2003 are $23,209,512, as follows:

<table>
<thead>
<tr>
<th>Year</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>2002</td>
<td>$885,721</td>
</tr>
<tr>
<td>2003</td>
<td>$22,323,791</td>
</tr>
<tr>
<td></td>
<td>$23,209,512</td>
</tr>
</tbody>
</table>

PEC’s expenditures to date involve emission reduction technologies at its Asheville, Mayo, and Roxboro facilities. Environmental compliance costs were incurred for project studies and investigations, engineering, and contracting.

As part of its review, the Public Staff requested information from PEC on the project costs, invoices documenting costs, and the purpose of the costs. PEC provided project cost sheets delineating actual project costs by year into the following categories: (1) company labor costs; (2) materials costs; (3) outside services costs; and (4) other costs. These costs are as follows:

<table>
<thead>
<tr>
<th>Category</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Company Labor</td>
<td>$1,276,561</td>
</tr>
<tr>
<td>Materials</td>
<td>68,249</td>
</tr>
<tr>
<td>Outside Services</td>
<td>21,631,350</td>
</tr>
<tr>
<td>Other</td>
<td>233,351</td>
</tr>
<tr>
<td>Total</td>
<td>$23,209,511</td>
</tr>
</tbody>
</table>

The project cost sheet was supported by detailed spreadsheets that incorporated all expenditures to date for a particular category. The Public Staff selected invoices in each category from the detailed spreadsheets and requested PEC to provide specific

---

1 PEC’s estimated and reported environmental compliance costs exclude costs attributable to the portion of its Mayo and Roxboro facilities that is owned by the North Carolina Eastern Municipal Power Agency.
information on the selected costs. The Public Staff also had extensive discussions with PEC personnel regarding the individual cost items charged to specific projects. PEC provided sufficient documentation to support each selected cost.

However, the Public Staff determined that there is a discrepancy between the environmental compliance costs that are being recorded on PEC’s books and the environmental compliance costs that are being reported to the Commission. The reported costs do not include labor loads or overhead costs. PEC explained that this practice is consistent with the types of costs considered to be environmental compliance costs in its estimate of $813,000,000. Typically, these costs are treated as part of project costs, whether they are considered incremental or not. The Public Staff recommends that PEC be required to file a reconciliation showing the per book and reported environmental compliance costs.

As stated above, PEC has cancelled the planned scrubber for Lee Unit 3. However, according to Appendix B to PEC’s April 1, 2004, report, PEC’s estimated environmental compliance costs remain approximately $813 million. Attachment I to this report shows the differences in the estimated environmental compliance costs between 2003 and 2004 according to PEC’s annual reports.

PEC was also requested to delineate costs related to complying with NOX SIP Call. NOX SIP Call requires electric utility generating facilities to reduce its emissions of NOX during the summer ozone season, while the objective of the Clean Smokestacks Act is to reduce overall NOX emissions for the entire year.

As a result of NOX SIP Call, PEC has undertaken a program to reconfigure its coal and air injection systems on its boiler units and/or install SCR technology at its Asheville 2, Cape Fear 5&6, Lee 1, Mayo 1, Roxboro 1-4, Sutton 1&3, and Weatherspoon 1-3. PEC also intends to use this equipment to achieve its emissions limitations as set forth in the Act. However, PEC will also be required to install SCR technology at its Asheville 1 and Lee 3 facilities in order to fully comply with the Act and achieve its required emissions limitations by 2007. The Public Staff has determined that PEC has not included any NOX SIP Call related costs to date in its reported actual environmental compliance costs.

III. Amortization of Costs

In Section 9 of the Act [G.S. 62-133.6(b)], the investor owned utilities are allowed to accelerate the cost recovery of their estimated environmental compliance costs over a seven-year period, beginning January 1, 2003, and ending December 31, 2009. PEC’s estimated environmental compliance costs are $813,000,000. The statute requires that a minimum of 70% of the environmental compliance costs be amortized before December 31, 2007, when the rate freeze period expires. In PEC’s case, this amount is $569,100,000. The annual levelized amount is $116,142,857. The maximum amount that can be amortized in any given year is 150% of the annual levelized environmental compliance costs or, in PEC’s case, $174,214,285.
On December 11, 2003, the Commission issued an order authorizing PEC to use certain regulatory liability and amortization accounts to record the environmental compliance costs associated with the Act. The Commission further ordered that no accrual of AFUDC would be allowed on any construction expenditures up to the $813,000,000 required to be amortized pursuant to the Act.

Using the protocols established by the Act and subsequent Commission orders, PEC reported that its environmental compliance costs amortization for 2003 is $74,218,804. The Public Staff has reviewed PEC’s quarterly amortization filings and concluded that the reported amounts appear to be accurate.

IV. Contracts

The Public Staff also requested PEC to provide copies of any contracts for engineering, procurement, project management, and construction awarded to engineering firms and construction companies for the purpose of installing the emission reduction technologies. PEC complied with the Public Staff’s request and provided the applicable contracts.

PEC has contracted with three vendors for engineering and design work, procurement of equipment, project management, and construction. PEC has elected to use one vendor for overall project management and engineering, another vendor for procurement of equipment, and a general contractor who will actually install the emission reduction technologies to comply with the Act.

PEC’s agreements with its vendors are incentive-fee based contracts for all of the thirteen coal-fired generation units identified by PEC that required emission reduction technology to comply with the Act. PEC does not intend to execute separate agreements for each facility.

The Public Staff reviewed these contracts and determined that they contain language establishing minimum performance standards on the equipment to be installed. PEC’s contract with its engineering and project management vendor contains a twelve-month performance guarantee from the date of functional operation. PEC’s contract with its equipment vendor contains a two-year performance standard that requires the equipment to perform as designed or the vendor will be responsible for replacing or repairing the equipment to achieve the emission reduction target specified by PEC. PEC’s contract with its general contractor contains a twelve-month workmanship guarantee.

V. Site Inspections

The Public Staff conducted no site inspections of any PEC facilities in connection with this audit. It is the intent of the Public Staff to conduct inspections of PEC’s coal-fired generating facilities as emission reduction equipment is installed.
